

POSTDOC IN SOCIAL/SYSTEMS NEUROSCIENCE

Laboratory of Neuroeconomics
Centre of New Technologies, University of Warsaw

We are seeking a curious and ambitious postdoc to join the Laboratory of Neuroeconomics and work on the project:

From group pressure to personal choice: The prefrontal circuits of social influence on individual reward preference

We investigate how the social environment shapes individual reward preferences – and how prefrontal circuits translate social information into personal choice.

WHAT YOU WILL DO

- semi-naturalistic, automated behavioral testing in mice
- stereotaxic brain surgery
- neuronal circuit manipulation
- analysis of complex behavioral datasets

WE ARE ESPECIALLY LOOKING FOR

- strong experience in stereotaxic brain surgery in rodents
- solid experience with behavioral testing
- optogenetics and/or chemogenetics are a strong asset
- advanced computational data analysis is a major plus

WHO YOU ARE

- independent and reliable
- entrepreneurial in your approach to science
- striving for excellence
- deeply curious
- willing to roll up your sleeves
- a strong team player

WHAT WE OFFER

- fully funded postdoctoral position for up to 4 years
- substantial autonomy
- mentorship supportive of professional development
- funding for conferences, schools and workshops
- international collaboration
- support in grant writing and development of your own ideas
- preferred start in 2026; negotiable for exceptional candidates

We are eager to hear from women and candidates
from groups underrepresented in Academia.
